

November 1, 2010

National Home Care Month, celebrated each November, provides home care agencies with an ideal opportunity to reach out and thank their staff and professional partners as well as the patients and families we serve. At Northeast HomeCare in Beverly, we are fortunate to care for a number of residents in 18 communities throughout Essex County, all the while partnering with physicians, case managers, nurse practitioners and other providers to make home care services possible.

As the Executive Director of Northeast HomeCare, I am privileged to lead a highly dedicated team consisting of nurses, physical therapists, occupational therapists, speech therapists, medical social workers, and home health aides. Additionally, Northeast HomeCare employs a skilled administrative staff that ensures our day-to-day operations run smoothly.

While November marks National Home Care Month, it is also American Diabetes Month. I would like to take this chance to recognize our healthcare partners with whom we work closely with to offer specialized care and education to patients with diabetes. All of us at Northeast HomeCare, especially our on-staff Certified Diabetic Educator, enjoy the collaboration that enables us to provide such excellent services to people with diabetes. We also thank our diabetic patients for entrusting our agency with their care.

Thank you for this opportunity to acknowledge Northeast HomeCare's staff and healthcare partners, in addition to our many patients and their loved ones.

Sincerely,

Karen Gomes, RN
Executive Director, Northeast HomeCare
