

“My arm
has woken up.”

*40-year-old woman treated
20 years post stroke*

Imagine being able to do all the things you haven't in years.

Northeast HomeCare, Ledgewood and Seacoast Nursing and Rehabilitation Centers, and The Center for Rehabilitation at Northeast Hospitals, all members of Northeast Health System, have teamed up with Myomo to offer the latest advance in neuro-robotics. The Myomo mPower device is a comfortable brace that uses the body's own biological signals to move and retrain your arm for increased range of motion, with clinical results for patients from two days to 21 years post stroke.
